Testing record

Mailles Machiana | COMP3415 Assignment 2 | November 8, 2026

Tests ran on Windows with Python 3.12.10 and unittest, using temporary save files. The final suite has 49 passing methods, including the original four. Some methods use subtests for several inputs. The starting commit is `82ed75e`.

Before and after

These logs are under `evidence/`. Earlier failures show what the tests caught before the corresponding code was fixed or added.

Run	Result	Log filename
Starter	4 pass	01-starter-tests.txt
Added baseline tests	27 tests, 6 failures	02-regressions-before.txt
Shared-code refactor	Same 6 failures	03-refactor-before-fixes.txt
Three fixes	27 pass	04-baseline-fixes.txt
Express tests before support	49 tests, 5 failures and 8 errors	05-cr01-before.txt
Express implemented	49 pass	06-cr01-after.txt
Final verification	49 pass	07-final-tests.txt

Main checks - all pass

- Pricing: a $50 student order gets $5 off. A 5,005-cent test subtotal rounds the discount to 501 cents. Standard delivery costs $6 at $95 after discount and is free at $100. See `tests/test_pricing.py`.
- Validation: duplicate notebook lines of 11 + 10 are rejected when stock is 20. Bad quantities, empty requests and an invalid later item leave saves and IDs unchanged. See `tests/test_validation.py`.
- Orders: duplicate lines of 9 + 11 are accepted. Cancelling restores stock once, even after reopening. History keeps original prices. Placement rechecks stock after a quote. See `tests/test_lifecycle.py`.
- Express: two notebooks total $22; two hoodies for a student total $84; three hoodies for a regular customer total $132. The fee stays $12, and reopening or cancelling preserves the original totals. See `tests/test_express.py`.
- Interfaces: real command processes and scripted menu input check defaults, help, output, errors and confirmation. See `tests/test_interfaces.py`.

Extra check and rerunning

Seven wrong changes were introduced in temporary copies: excluding the $50 boundary, checking duplicates separately, restoring stock twice, waiving or discounting express, rounding down and removing express from command choices. All seven were caught; output is in `evidence/08-targeted-mutations.json`.

```
python -m unittest discover -s tests -v
python scripts/verify.py
```
